LoRaWAN® IP68 PULSE READER + ANALOG UM3023

LoRaWAN® IP68 pulse reader, enables acquisition of data from the pulse emitting devices and analog interfaces and transmits it wirelessly to the LoRaWAN® network.

LoRaWAN® IP68 pulse reader is meant to be connected to the existing devices' pulse or analog signal output. It is powered by a long-life battery.

OVERVIEW

Efficient

LoRaWAN® IP68 Pulse Reader has a bidirectional, battery powered, long-range transceiver with low power consumption.

Intelligent

Real-time usage data is gathered wirelessly and processed automatically. Data is accessible from your LoRaWAN® provider.

APPLICATIONS

Pulse metering

Frequent reporting provides a detailed usage overview. Can be used with any pulse emitting device (water, electricity, gas meter, etc.).

Analog measurement

Possible to read both 0..10V & 4mA..20mA devices with configurable thresholds

Usage detection

LoRaWAN® Outdoor Pulse Reader can be configured to trigger mode to send alerts when usage is detected.

FEATURES

- Long range wireless data transmission
- Pulse counting
- 4..20mA interface
- 0..10V interface
- Pre-installed long-life battery
- Built-in antenna
- DIN rail mount
- Trigger mode
- Configurable reporting interval
- Maintenance free - install & forget
- Easy installation
- Average life 8 years*
- Secure communication
- Thresholds

* Lifetime depends from the device location and reporting interval.

SPECIFICATIONS

Length:	109 mm
Height:	27 mm
Width:	27 mm
Weight:	72 g
Cable length:	1 m
Operating temperature:	-20°C ... +65°C
Communication range:	up to 15 km*
Tx power:	up to +20 dBm
Rx Sensitivity:	-142 dBm
MAC Layer:	LoRaWAN®
Physical Layer:	LoRa®
Connector:	M8
Body material:	PA6
IP Rating:	IP68
Communication:	LoRaWAN®

* Communication range is dependent on the location of the sensor and nearest base station.

INPUT SPECIFICATIONS

Digital	Max Frequency: 15 Hz
	(Dry contact) Pulled internali to: 3 V
	(Active contact) Max voltage: 6 V
Analog	(4mA..20mA) Max input current: 30mA
	(0V..10V) Max input voltage: 20V

COMMUNICATION

Bit order:	LSB
Usage reporting:	Unconfirmed messages
Status reporting:	Confirmed messages

4	<i>max_offset</i>	type: int4 unit: °C formatted: *2
5		
6		
7		

Interface values are reported according to the interface map in the order defined in the interface map

*only sent if *active_alerts* flag is sent in *reported_interfaces* byte

** Absolute value. Multiply with -1 to get the actual value.

Status message can be triggered with 1 second magnet switch (same place as activating). The time between two consecutive packets is dependent of the duty cycle. If the message is triggered too often, it will go to lockdown for 1 hour. It will still be working as meant to, but will not send any data.

INPUT SCHEMATICS

Digital input

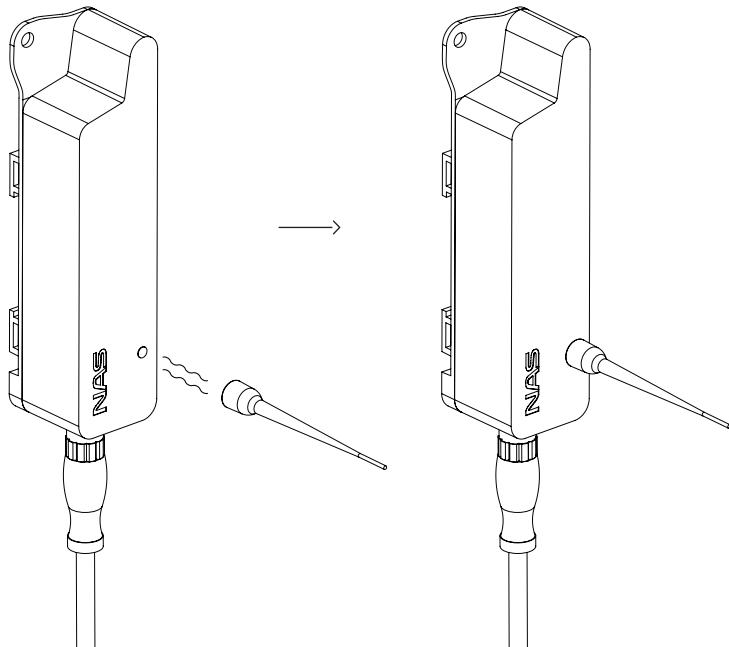

Analog input

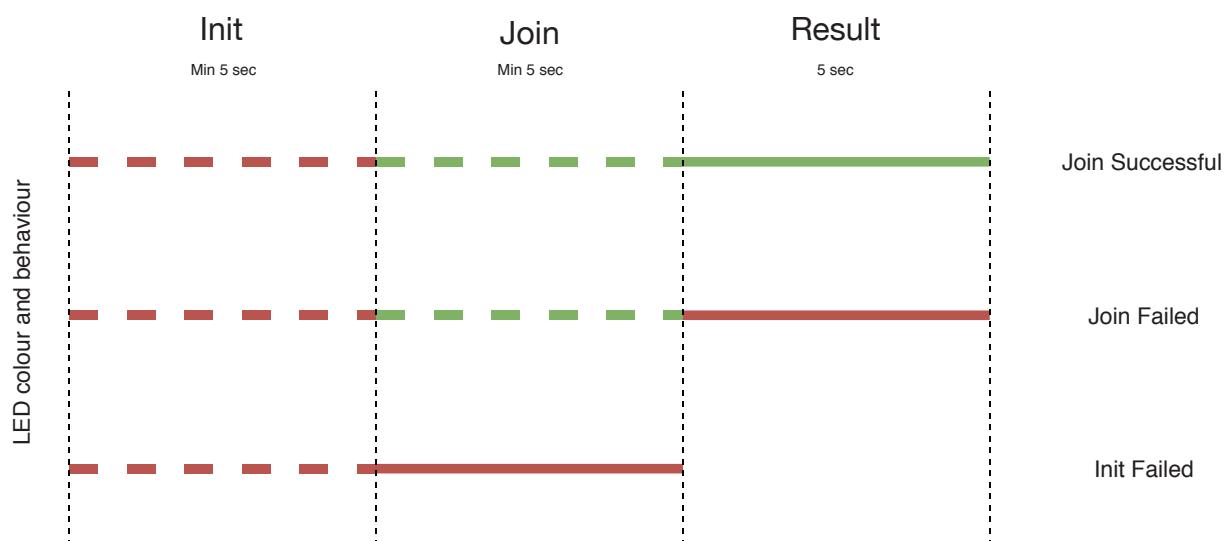

ACTIVATION

To activate the device, hold the magnet against the device (see illustration) for atleast 1 second. You can remove the magnet when the red light starts to flash.

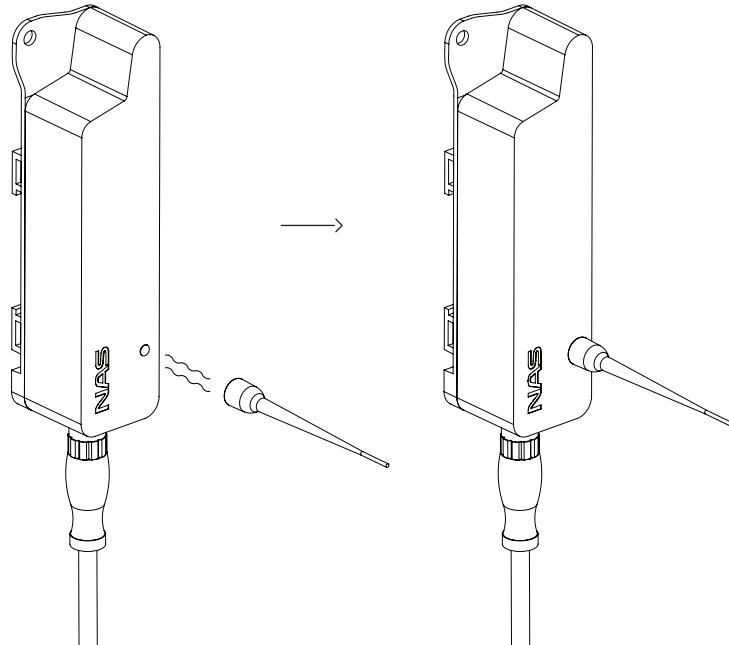

LED behaviour during activation

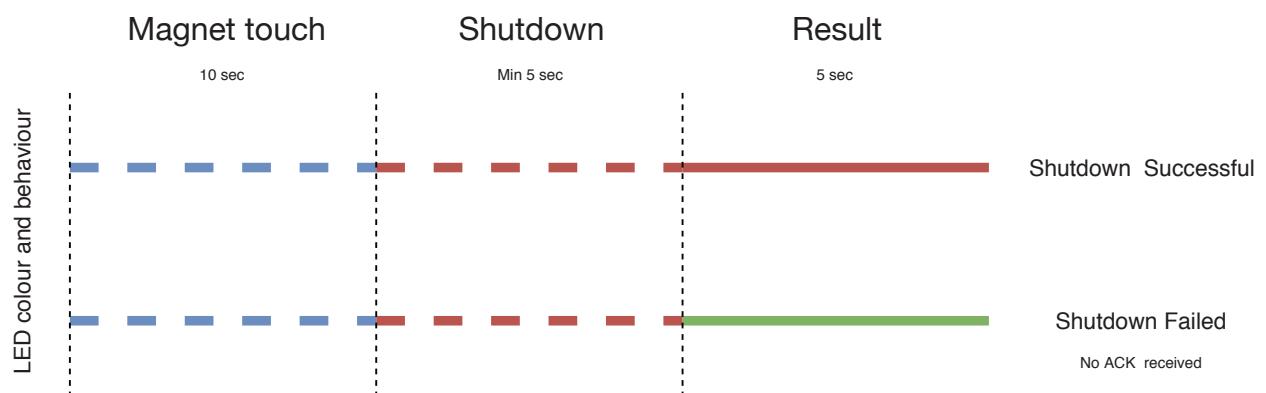

SHUTDOWN

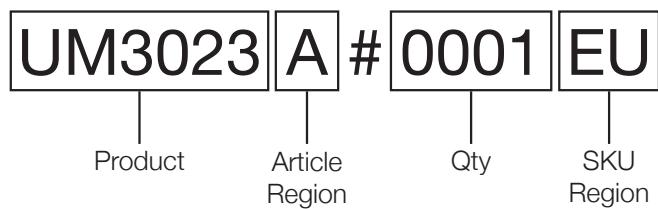

To activate the device, hold the magnet against the device (see illustration) for 10 seconds. You can remove the magnet when the red light starts to flash. During shutdown the device will send the shutdown message. If it does not get the ACK for it, it will cancel the shutdown.

LED behaviour during shutdown

REVISION HISTORY

1.0 - First version

1.1 - Added communication protocol.

1.2 - Communication protocol updated to 0.5.0

2.0 - Support for fw 0.7.0

- RSSI as absolute value
- Analog interface support
- Updated battery mapping
- Configuration request

2.1 - Interface schematics, LED behaviour

3.0 - Support for FW 0.8.4 (first draft)

- Boot packet battery info removed, config restored added
- Status packet optional active_alerts Byte, added battery % byte, added temperature extremes byte. Added device serial option for digital interface
- Configuration packet new multiplier logic. Possible to offset reading instead of only setting. Possible to add device serial to digital interfaces. On digital interface config mode has been made mandatory. On analog config general has been made mandatory.
- Configuration request packet has separate request for interface config.
